

NIRANJAN S

Chennai, India | +91-75501-04501 | imniranjanheree@gmail.com

PROFESSIONAL SUMMARY

Cybersecurity-focused B.Tech student (GPA: 8.79/10) at SRM Institute of Science and Technology, Chennai, holding an ISC2 Certified in Cybersecurity (CC) credential. Invented a patent-published automotive security framework; shipped 3 production-grade software products across mobile and web. Writes production code in React, Flutter, and SQL; conducts vulnerability assessments using Nmap and DirBuster on Linux. Available for internships and entry-level roles in cybersecurity or software engineering.

EDUCATION

B.Tech – Computer Science Engineering (Cybersecurity) 2023 – 2027
SRM Institute of Science and Technology, Ramapuram, Chennai | GPA: 8.79 / 10.0 | Top 15% of cohort

Higher Secondary Certificate (HSC) 2022 – 2023
SAJV | 76%

CERTIFICATIONS

ISC2 Certified in Cybersecurity (CC) Issued 2026

- Passed the ISC2 CC exam, covering 5 domains: Security Principles, Business Continuity & Disaster Recovery, Access Controls Concepts, Network Security, and Security Operations.
- Credential is vendor-neutral and internationally recognised across government, finance, and technology sectors.

TECHNICAL SKILLS

Frontend: React.js, Vite, HTML5, CSS3
Mobile: Flutter, Android Studio, Dart
Database & Backend: MySQL, Supabase (PostgreSQL), REST API design and integration
Cybersecurity Tools: Nmap, DirBuster, Linux CLI, Zero Trust Architecture, network traffic analysis, access control implementation
Practices: Threat modelling, risk assessment, secure SDLC, version control (Git), cross-functional team coordination

PROJECTS

Automotive Secure System — Patent Published (Grant Pending) 2025 – Present
Student Startup | Zero Trust Architecture | Automotive Cybersecurity | Indian Patent Office

- Invented a Zero Trust-based security framework for automotive subsystems, eliminating implicit trust between vehicle ECUs and external communication interfaces.
- Enforced continuous identity verification and least-privilege access across all subsystem interactions, reducing the attack surface exposed by legacy CAN bus architectures.
- Filed and received publication from the Indian Patent Office — a milestone reached by fewer than 5% of student inventors nationally.
- Prototyping the startup MVP to target OEM and fleet security markets; currently in pre-seed validation stage.

School Management System — 3-App Suite 2024 – 2025
Flutter · Android Studio · React.js · Vite · MySQL | 3 deployable apps

- Sole-authored a 3-product suite: a student Android app (attendance tracking, grade updates), a teacher Android app (attendance marking, academic records), and an admin web portal (backend operations).
- Cut estimated manual attendance recording time by 70% by replacing paper-based processes with a real-time digital system.
- Normalised the MySQL database schema to support multi-role access control, separating student, teacher, and admin permissions at the data layer.

- Coordinated directly with school administrators through two rounds of feedback; product confirmed for deployment pending final sign-off.

Event Registration Platform

2025

React.js · Supabase (PostgreSQL) · REST API | Live deployment

- Integrated Supabase's PostgreSQL database via REST API to handle real-time attendee registration, with data persisted and retrievable within 200ms average response time.
- Trimmed the sign-up flow to 4 fields and under 60 seconds completion time after testing with 10 pilot users.
- Sustained zero downtime and zero data-loss incidents across the full registration window of the live event.

LANGUAGES

Tamil (Native) | English (Professional Working Proficiency)
